

Construction Health and Safety Technician (CHST) Examination Preparation Workshop

Columbia-Willamette ASSP Chapter and the Construction Safety Summit will be hosting a Construction Health and Safety Technician (CHST) workshop presented by SPAN™ International Training, LLC. The CHST certification focuses on construction safety management principles and practice. It is designed for practitioners who fill job site safety positions on construction projects. This certification does not require a college degree. A single 200 question examination is required.

This workshop is intended to assist you in preparation for the CHST examination. You will receive information on CHST education and experience requirements for the certification and practice on 200 questions addressing the eight areas to be covered by the exam. The CHST examination is administered by the Board of Certified Safety Professionals [BCSP](http://www.bcsfp.org). For specific information about becoming a CHST, please visit the BCSP website at <http://www.bcsfp.org/CHST>

At the completion of the CHST prep workshop participants will learn:

- Safety program management and administration
- OSHA regulations and inspections
- Training and orientation
- Hazard communication
- Inspections and audits
- Job hazard analysis/pre-job planning
- Accident investigation
- Recordkeeping requirements

The workshop includes a two-volume set of professionally published CHST Exam Study Workbooks, BCSP approved scientific calculator, pencils, notepad, highlighter, and SPAN™ offers the CertBok® online learning management system. The CertBok® includes a targeted database of questions with multiple enhanced learning, exam simulation, and performance tracking capabilities. A six-month CHST CertBok® membership is provided as part of the workshop (\$275 value!).
